Overview

The Blazor Spinner denotes when long-running tasks are ongoing, tasks for which there is no information about their progress. The component provides circular progress indicators without interaction capabilities.

To show users the progress information of a task, the [Blazor ProgressBar](#) component should be used, instead.

Built-in types

Several built-in SASS-based themes are available such as Tailwind CSS, Bootstrap 5, Bootstrap 4, Bootstrap, Material, Fabric, and High Contrast. Simplify theme customization either by overriding the existing SASS styling or creating custom themes by using the Theme Studio application.

Descriptive labels

Include labels with the Blazor Spinner that give additional, meaningful information about the task currently running.

Various sizes

Adjust the size of the Blazor Spinner to large, medium, or small to help integrate it within other Blazor components.

Templates

Using a template, users can create a custom Blazor loading component.

Visibility

You can control the Blazor Spinner's visibility easily through a two-way binding property and asynchronous methods.

Customization

The default appearance of Blazor Spinner can be customized by customizing its color and stroke width. Also, you can set the z-index for Blazor spinners dynamically based on application scenarios.

Not sure how to create your first Blazor Spinner? Our documentation can help.

I'd love to read it now

What do our customers say about us?

Kevin Kerr

Kirk-Rudy

Syncfusion controls contain almost everything a developer could ask for, saving us time and money. All backed up by unmatched support. Syncfusion controls are a developer's dream come true.

Georg Kukula

GEW Software Entwicklung GmbH

I would highly recommend using Essential Studio and have found that the Syncfusion support team is one of the fastest I have worked with.
